Product

Characteristics

Excellent lubricating and slide capacity and providing a good adhesion and sustainability, result of its low surface tension. Designed for light and transparent lubrication of fine mechanisms in the food industry, leaving a water repellent film with good electrical resistance. Temperature resistance range of finished film: -50°C to +250°C. Free from lead and animal fats.

Applications

On all food processing equipment and machine parts in locations where there is a potential exposure of the lubricated part to food. Suitable for use in all food plants, meat plants, dairies, bakeries, canneries, breweries and bottling plants, vending machines and all food product delivery vehicles.

Use

- Shake can thoroughly before use.
- Make sure the surface to be treated is clean and dry.
- Spray evenly over the surface from a distance of 25 to 30 cm.
